

Get your front office out of the insurance business.

Benefits verification, predetermination packets, and chasing payers quietly consume **10–20+ hours a week per location** — hours you're paying for that never touch a patient. amux does that paperwork automatically, inside your office, on your existing software. Your team reviews and approves; nothing goes out without their sign-off.

Runs on your own machine

Your logins, your data

HIPAA-compliant & BAA-backed

Human approves everything

WHAT WE AUTOMATE FIRST

Eligibility & predetermination, end to end

- ✓ **Verify benefits before the patient sits down** — real-time eligibility (X12 270/271), no hold music.
- ✓ **Assemble payer-specific predetermination packets** — radiographs, perio charting, notes, and procedure codes, pulled from your PMS.
- ✓ **Draft the clinical narrative** for your team to review and edit.
- ✓ **Submit and follow up** through your existing clearinghouse or payer portal — then poll for status so nobody babysits a fax.
- ✓ **Catch denials early** and prep the resubmission or appeal.
- ✓ **Post the estimate** back into the patient record and ledger.

And insurance is just the beginning. If it happens on a computer or a phone, amux can run it — recall and reschedule outreach, review requests, referral letters, supply orders, month-end reporting. The sky is the limit.

10–20+ hrs

per week, per location, commonly spent on verification & predeterminations

~1 in 5

claims denied on first pass — hours of rework we help you avoid

0

new dashboards to learn — run it by voice or text, from your phone

Not another cloud vendor holding your PHI

amux runs on a computer **inside your office** (no spare machine? we ship one and keep it online). It works under **your own logins**, so patient data and credentials never leave your walls. We sign a **BAA** before touching any PHI.

Your team stays in charge

amux accelerates the paperwork — it never decides coverage. **Nothing clinical, coded, or billed is ever auto-submitted.** Every packet and narrative is reviewed and signed off by your people.

This is how you stay on AI's cutting edge

No AI hires, no evaluating the tool of the month. amux runs on today's **frontier AI models** and inherits every upgrade automatically — so your practice keeps compounding capability while competitors read vendor decks. We build your first workflow with you, then teach your team to build the rest.

WORKS WITH THE SOFTWARE YOU ALREADY RUN

Dentrix · Eaglesoft · Open Dental · Curve · DentalXChange · Vyne · Change Healthcare

STEP 1

Talk to us

One call with the owner. We scope your highest-leverage workflow together.

STEP 2

We install in your office

On your desktop, or a Mac Studio we buy and keep online 24/7.

STEP 3

We build your first workflow

Live and running — then we teach your team to build more.

STEP 4

You run it from your phone

Watch it work, kick off tasks, approve what matters — from anywhere.

SIMPLE, TRANSPARENT PRICING

\$5,000

One-time onboarding: scope, install, and your first working workflow

\$5,000/mo

Priority support, maintenance, new feature builds, unlimited workflows

~\$200/mo

AI usage, passed through at cost — no markup, no surprises

Bring one workflow to one call.

We'll scope your highest-leverage automation live and tell you honestly whether it's a fit — before you commit to anything. Bring the person who owns the outcome: you.

amux.io/concierge

Compare that to 15 hours a week of front-office time per location — before counting denial rework, delayed treatment acceptance, and turnover in a role nobody enjoys.

Time and denial figures are commonly reported by dental billing sources; your numbers will vary by payer and plan. A predetermination is an estimate, not a guarantee of payment — payers approve claims. amux drafts, assembles, submits, and tracks; your team reviews, signs, and decides. © amux
